## FUNGI

Here are some pictures of fungi which you may see in Barnfields Sand Beds. Fungi are very difficult to identify for many are very similar and a lot of them do not have common names. There are also a number of poisonous ones so it is best not to handle them and always wash your hands afterwards if you should touch them.

See if you can find these.

common ink cap

ear fungus

coral spot fungus

scarlet elf cup

earth star

stag's horn

many zoned polypore

puff ball

silver-leaf fungus

shaggy pholiota

fly agaric

birch bracket
